“WHITE INLAY FOR SMART CARDS”

Based on the technical specifications and sample submitted, subject article is an inlay consisting of thin copper wires (coils) laid out and embedded in a white polyvinyl chloride (PVC) sheet. The PVC sheet measures 495 mm x 390 mm x 0.24 mm (LxWxT) and contains 32 inlays. Each inlay will be cut to a designed size and mounted with an integrated circuit (IC) or chip module and other components (not part of the importation) to produce a “smart card”, such as a credit card, automated teller machine (ATM) card, or identification card. Subject article serves as an embedded antenna for wireless connection between the “smart card” and a device (for example, a card reader or ATM machine).

5 REASONS FOR CLASSIFICATION

Heading 85.04 of the ASEAN Harmonized Tariff Nomenclature (AHTN) 2017 covers electrical transformers, static converters (for example, rectifiers) and inductors. The pertinent Harmonized System (HS) Explanatory Notes (EN) state that this heading covers induction coils, a kind of transformer in which an intermittent or fluctuating direct current in the primary induces a corresponding current in the secondary. They can be used either to step up the voltage to a higher value or, in the case of telephony, to reproduce in the secondary circuits a small fluctuating current corresponding to the fluctuation imposed on a steady DC in the primary. Inductors or inductances obtained in the form of individual components by a printing process remain classifiable in this heading.

In view thereof, subject article is classified under AHTN 2017 subheading 8504.50.93, with a Most Favoured Nation (MFN) rate of duty of zero and ASEAN-China Free Trade Area (ACFTA) rate of duty of zero, subject to submission of Certificate of Origin (CO) Form “E”.

Packed in 200-kg drums, subject article is administered to poultry at a rate of 1.0 to 3.0 kg per ton of feed and to piglets at a rate of 1.0 to 3.5 kg per ton of feed.

5 REASONS FOR CLASSIFICATION

Heading 38.08 of the ASEAN Harmonized Tariff Nomenclature (AHTN) 2017 covers, insecticides, rodenticides, fungicides, herbicides, anti-sprouting products and plant-growth regulators, disinfectants and similar products, put up in forms or packings for retail sale or as preparations or articles (for example, sulphur-treated bands, wicks and candles, and fly-papers). The pertinent Harmonized System (HS) Explanatory Notes (EN) state that this heading covers a range of products intended to destroy pathogenic germs, insects (mosquitoes, moths, Colorado beetles, cockroaches, etc.), mosses and moulds, weeds, rodents, wild birds, etc. The products of heading 38.08 include, among others, disinfectants. Disinfectants are agents which destroy or irreversibly inactivate undesirable bacteria, viruses or other micro-organisms, generally on inanimate objects. Disinfectants are used, for example, in hospitals for cleaning walls, etc., or sterilising instruments. They are also used in agriculture for disinfecting seeds and in the manufacture of animal feeds to control undesirable micro-organisms. The group includes sanitisers, bacteriostats and sterilisers.

In view thereof, subject article is classified under AHTN 2017 subheading 3808.94.90, with a Most Favoured Nation (MFN) rate of duty of 3% ad valorem.

This ruling shall be valid for five (5) years from the date of issuance and shall continue to apply unless the law, facts, or circumstances supporting this ruling have changed.

4	DESCRIPTION OF GOOD
	“DETOX”
	<p>Based on the certification of composition, product specifications, and manufacturing process submitted, subject article is pure bentonite in the form of a fine, free-flowing, white powder. It is produced from crude sodium-calcium aluminosilicates (bentonite), of varying quality and purity, which are blended to obtain a homogenous mixture. Packed in 25-kg bags and 1,100-kg big bags, subject article is used as a mycotoxin binding agent for animal feeds and is to be added at a rate of 1.0 to 1.5 kg per metric ton of feed.</p>
5	REASONS FOR CLASSIFICATION
	<p>Note 1 to Chapter 25 of the ASEAN Harmonized Tariff Nomenclature (AHTN) 2017 states that except where their context or Note 4 to this Chapter otherwise requires, the headings of this Chapter cover only products which are in the crude state or which have been washed (even with chemical substances eliminating the impurities without changing the structure of the product), crushed, ground, powdered, levigated, sifted, screened, concentrated by flotation, magnetic separation or other mechanical or physical processes (except crystallisation), but not products which have been roasted, calcined, obtained by mixing or subjected to processing beyond that mentioned in each heading.</p> <p>Heading 25.08 of the AHTN 2017 covers, among others, other clays (not including expanded clays of heading 68.06), andalusite, kyanite and sillimanite, whether or not calcined. The pertinent Harmonized System (HS) Explanatory Notes (EN) state that this heading covers all natural clayey substances (other than kaolin and other kaolinic clays of heading 25.07) consisting of earths or rocks of sedimentary origin with a basis of aluminium silicates. These products remain in this heading even if they have been heated to remove some or most of the associated water (to produce absorbent clay) or when fully calcined. In addition to common clays, this heading includes, among others, bentonite, a clay derived from volcanic ash; largely used as an ingredient of moulding sand, as a filtering and decolouring agent in oil refining and for degreasing of textiles.</p>
