D. MODE OF TRANSPORT

CODE	MODE	EXPLANATION
1	Maritime transport.	Provision is made for separate reporting of inland water transport under code 8, assuming that proper definitions and rules of application will be given, particularly when a transport covers sea as well as inland waterways.
2	Rail transport.	
3	Road transport.	
4	Air transport.	
5	Mail.	(Active mode of transport unknown) - This code is provided for practical reasons, despite the fact that mail is not a genuine mode of transport. In many countries, the value of merchandise exported and imported by mail is considerable and the exporter or importer concerned would be unable to state by which mode postal items passed the national border.
6	Multimodal transport.	(Active mode of transport unknown) - This code is provided for practical reasons, despite the fact that multimodal transport is not a genuine mode of transport. It can be used when goods are carried by at least two different modes from a place at which the goods are taken in charge by a transport contract. (Operations of pick-up and delivery of goods carried out in the performance of a unimodal transport, as defined in such a contract shall not be considered as multimodal transport.)
7	Fixed transport.	This code applies to installations for continuous transport such as pipelines, ropeways and electric power lines. Inland water transport. This code is only used for such ca-

ses when this application of waterborne transport is reported separately within the framework of a one-digit code.

This code can be used when the mode is not known or information on it is not available at the time of issuing the document concerned.

The numeric code is to be used in combination with the name of the vessel or flight number, thus:

and entered in Box 7.
